FUND OBJECTIVE

The goal of the Peregrine Capital Dynamic Alpha QI Hedge Fund is to generate strong absolute returns while maintaining capital stability. We aim to achieve long-term inflation-beating growth.

The fund typically invests in a wide range of assets, with a preference for shares and fixed income instruments. The fund managers undertake a higher level of market risk than a traditional low equity hedge fund but strive to reduce risk through disciplined hedging practices and by maintaining high levels of liquidity to minimise correlation to the equity market.

IMPORTANT NOTES ON CALCULATION OF NET RETURNS AND RISK MEASURES:

The calculation of all net returns from 1 December 2014 until 31 July 2016 relates to the Peregrine Capital Dynamic Alpha Fund, prior to its inclusion under CISCA. Thereafter, the data relates to the Peregrine Capital Dynamic Alpha QI Hedge Fund ("Dynamic Alpha Fund").

The Dynamic Alpha Fund does not have a benchmark and does not contribute towards the return of the ASISA SA Multi Asset - Medium Equity Category. The data for the ASISA SA Multi Asset - Medium Equity Category and CPI is provided for comparative purposes.

The graph on the first page is for illustrative purposes only and reflects actual fund performance and notional performance of the comparative indices, based on a lump sum contribution on the inception date of the fund. Performance is shown net of all fund charges and expenses and includes the reinvestment of distributions.

The asset allocation table on the first page summarises the see through net and gross economic interest exposure to major asset classes. The classification of foreign vs domestic is computed by reference to the origin of company earnings rather than the country of listing.

Maximum drawdown is the largest peak to trough decline during a specific period of investment.

Standard Deviation is a measure of how much a fund's returns vary from its average over time. Higher standard deviation indicates greater variability in returns and therefore higher investment risk. Expressed as an annualised percentage.

Sharpe Ratio refers to a measure of risk-adjusted return, calculated as the excess return of a portfolio over the risk-free rate divided by the portfolio's Standard Deviation. A higher Sharpe Ratio indicates better risk-adjusted performance.

Sortino Ratio is a measure of risk-adjusted return focusing on downside volatility only. Unlike the Sharpe Ratio, it does not penalise upside volatility, making it a more refined measure of downside risk management. A higher Sortino Ratio indicates superior downside risk-adjusted performance.

FUND COMMENTARY

Quarterly Performance

The Peregrine Capital Dynamic Alpha Hedge Fund delivered a net return of 1.1% for the second quarter of 2026. This compares with the S.A. Multi Asset Medium Equity Index, which gained 3.1% in the quarter.

Attribution

The fund's semiconductor and technology holdings were the largest contributors to performance, with further contributions from currency positioning and luxury, retail and insurance holdings. Precious metals miners, protective index future hedges and underlying fund holdings detracted in the quarter.

Macro

The most important event of the quarter was the ceasefire agreement between the US and Iran, signed on 17 June, under which the Strait of Hormuz, through which roughly a fifth of the world's oil flows, is reopening. The oil price, which spiked above \$110 per barrel during the conflict, fell back to around \$73 by quarter end, close to pre-war levels. Lower oil prices meaningfully reduce the inflation pressure that dominated the first quarter.

Global equity markets recovered strongly as hostilities ceased and company earnings surprised positively, particularly among businesses benefitting from the build-out of artificial intelligence infrastructure, where demand for computer memory continues to far outstrip supply. The S&P 500 returned 14.9% in US dollars for the quarter, ending at a record high, and European markets had their best quarter in over five years. Hong Kong lagged, falling 7.6%.

In South Africa, the lower oil price allowed the rand to recover and eased inflation pressure, supporting financial and industrial shares. However, precious metals prices fell sharply as demand for safe-haven assets faded: gold had its worst quarter since 2013 and platinum its worst since 2020, and mining shares fell as a result, leaving the JSE All Share Capped Index return at -2.4% for the quarter. Precious metals are among South Africa's largest exports, and lower prices weaken the country's trade balance and government revenue outlook. We are therefore somewhat less optimistic on the domestic economy than we were at the start of the year, although the lower oil price provides a partial offset.

Portfolio Construction

We reduced risk during the March selloff, participated selectively in the recovery, and then took profits as markets reached record highs. In mid-June we hedged the majority of the fund's offshore equity exposure using index futures, while increasing domestic exposure as the oil price fell and the rand recovered. During the quarter, we took profits in the fund's memory and data storage holdings after very strong gains, rotating a portion of the proceeds into large technology platform companies.

At quarter end, gross exposure fell from 240% to approximately 208%, while net exposure to equities and real estate declined from 30% to approximately 26%.

Outlook

The peace remains fragile and the full reopening of oil shipping routes will take months, but the inflation shock of the first quarter is fading. Following the strong rally, we have reduced net exposure to protect the gains generated in the quarter. Within technology, we see the best value in the large platform companies, whose share prices have lagged the memory-driven rally and which trade at low valuations relative to their improving growth prospects. We believe the fund is well positioned to deliver strong risk adjusted returns for investors in the coming quarters.

FUND DISCLAIMER AND DISCLOSURE

INVESTMENT STRATEGY AND MANDATE

The fund invests across asset classes, both locally and offshore. Significant exposures may be taken in individual positions from time to time. Peregrine Capital employs a bottom up stock selection process based on rigorous and disciplined fundamental research, drawing on experience of covering the sectors and companies over many years. Peregrine Capital focuses its time on building up a detailed understanding of specific companies, rather than predicting the economic trends or taking a view on overall markets.

RISK WARNING

The risks associated with investing in the fund include, but are not limited to, the following: general market risks (such as general movements in interest rates; external factors [war, natural disasters and such like]; changes to the law and regulatory frameworks; governmental policy changes; global, regional or national economic developments and risks related to a specific security (such as the possibility of a company's credit rating being downgraded).

The fund managers may use leverage. Leverage is the use of various financial instruments or borrowed capital, such as margin, to increase the potential return of an investment. Leverage includes the use of derivatives. Derivatives derive their value from the value of an underlying asset. The use of leverage within the fund involves risk because depending on how the leverage is structured, the fund's losses or gains may be unlimited. Other risks include counterparty risk and liquidity risk. The fund may take significant exposures in individual positions which may create concentration risk.

Counterparty risk is the risk that the other party to a transaction may not be able to perform its obligations. Liquidity risk means that during volatile periods, the tradability of certain instruments may be impeded. Where foreign securities are included in the fund there may be potential constraints on liquidity and the repatriation of currency, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks and potential limitations on the availability of market information.

GENERAL INFORMATION

This document is the minimum disclosure document ("MDD") required by Board Notice 92 of 2014 published by the Financial Sector Conduct Authority under the Collective Investment Schemes Control Act, No. 45 of 2002. Collective Investment Schemes in Hedge Funds should be considered as medium to long-term investments. The value may go down as well as up and past performance is not necessarily a guide to future performance. Collective Investment Schemes in Hedge Funds are traded at the ruling price and can engage in scrip lending and borrowing. A schedule of fees, charges and maximum commissions is available on request from PCCI. Neither PCCI nor Peregrine Capital provides any guarantee either with respect to the capital or the investment performance of the fund.

PCCI has the right to close the fund to investments from new investors, and/or to close the fund to new investments, and/or to accept new investments only from certain persons or groups of persons, and/or to limit or suspend the creation and issue of new participatory interests, in each case on such terms as it may determine, if such restrictions will, in PCCI's view, benefit the fund or the effective management thereof or for any other reason whatsoever. Where any forecasts or commentary about the expected future performance of asset classes, or the market in general, are made in this document, please note that neither Peregrine Capital nor PCCI guarantee that such forecasts or commentary will occur.

CALCULATION OF THE NAV AND PRICE

The value of participatory interests (also referred to as units) is calculated on a net asset value ("NAV") basis. The NAV is the total value of all assets in the fund including any income accruals and less any permissible deductions (which may include audit fees, brokerage, service fees, securities transfer tax and bank charges) for a particular class. The price of participatory interests is calculated by dividing the NAV by the number of participatory interests in issue for that class. The price of participatory interests is published monthly in the MDD, which is available at www.peregrine.co.za.

INVESTMENT PERFORMANCE

The performance calculated and shown is that of the fund. Performance has been calculated using net NAV to NAV numbers with income reinvested. The investment performance for each period shown reflects the net return for investors who have been fully invested for that period. Individual investor investment performance may differ as a result of initial fees (if applicable), the actual investment date, the date of reinvestment of distributions and/or distribution dates, and dividend withholding tax. Where periods of longer than 1 year are used in calculating past performance, certain figures may be annualised. Annualised performance is the average return per year over the period. Actual annual figures and investment performance calculations are available on request from PCCI.

PERFORMANCE FEES

A management and performance fee is charged to the fund. Performance fees are payable on positive performance using a participation rate of 20%.

Total Expense Ratio for year ended 31 March 2026: 3.66%

A HWM is applied, which ensures that performance fees will only be charged on new performance. There is no cap on the Rand amount of performance fees.

FUND VALUATION TIME

The end of the day of the last day of the month

TRANSACTION CUT-OFF TIMES

Please refer to the PCCI Terms and Conditions, which are available on request from PCCI or at www.peregrine.co.za.

Application forms are available at www.peregrine.co.za.

CPI

The CPI figures are lagged by one month as the number was calculated before this month's inflation rate was released.

SA MULTI ASSET - MEDIUM EQUITY CATEGORY

The South African Multi Asset – Medium Equity category is defined in the ASISA Standard on Fund Classification for South African Regulated Collective Investment Scheme Portfolios. .

LIMITATION OF LIABILITY

This MDD has been compiled for information purposes only and does not take into account the needs or circumstances of any person or constitute advice of any kind. It is not an offer to sell participatory interests or an invitation to invest. The information and opinions in this MDD have been recorded by PCCI and Peregrine Capital in good faith from sources believed to be reliable, but no representation or warranty, express or implied, is made as to their accuracy, completeness or correctness. PCCI and Peregrine Capital accordingly accept no liability whatsoever for any direct, indirect or consequential loss arising from the use of this MDD or its contents.

GLOSSARY

Annualised performance: reflects longer term performance rescaled to a 1 year period. Annualised performance is the average return per year over the period.

High Water Mark (HWM): The highest point in value that the investor's unit has reached. The HWM mark ensures that Peregrine Capital does not get paid a Performance Fee for the same performance twice. The HWM is updated at each Crystallisation Point.

Total Expense Ratio: includes the annual service charge, performance fee and administrative costs, but excludes VAT and fund transaction costs, expressed as a percentage of the average monthly value of the fund. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return.

Transaction Costs: are the costs relating to the buying and selling of the fund's underlying assets, expressed as a percentage of the NAV. Transaction costs are a necessary cost in managing the fund and may impact the returns.

Total Investment Charge is the sum of the TER and TC. These should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund and the investment decisions of the fund manager. Since the fund returns are quoted after the deduction of these expenses, the TER and TC should not be deducted again from published returns.
